

Panorama 9.1: Managing Firewalls at Scale (EDU-220) Overview

Panorama 9.1 course will guide candidates to gain brief knowledge about their Panorama™ management server and how to manage and configure it. Upon completion of this course, administrators should have good understanding with the Panorama™ management server's role in securing and managing their overall network.

About the training

- **Study Material:-** Live lectures, Streaming Recorded Videos, Online Lab Workbook, and Remote Virtual Lab access.
- **Duration:-** 2 Days (16 Hours)

Requirements

Candidates must complete the Firewall 9.1 Essentials: Configuration and Management (EDU-210) class and be familiar with Palo Alto Networks next-generation firewall management and basic networking topics, including IP addressing and routing.

What you will learn

- Understand how to configure and manage the next-generation Panorama™ management server
- Explore configuring templates (including template variables) and device groups
- Get familiar with administration, log collection, and logging and reporting
- Understand planning and design considerations for Panorama deployment

About Instructor

The trainer of this course has 9+ years of industrial experience and is expert in technology. The trainer is also verified by UniNets itself. He has delivered vast and complex project on the same around the world.

Course Content

- Initial Configuration
- Adding Firewalls
- Templates
- Device Groups
- Administrative Accounts

- Log Collection and Forwarding
- Aggregated Monitoring and Reporting
- Panorama Design: A Case Study
- Troubleshooting

Note: ***most of the course topics are covered with hands-on lab exercises and others are theoretical
